

# Package: lookup (via r-universe)

June 7, 2024

**Title** Lookup R function definitions, including compiled code, S3 and S4 methods

**Version** 0.0.0.9000

**Description** Provides a simple interface to lookup and print R function definitions, including C and C++ compiled code from .Call, .C, .Internal and .External calls. Also lookup of S3 and S4 generics, including a simple dialog to print any or all of the loaded methods for the generic.

**Depends** R (>= 3.0.0)

**Imports** gh, memoise, Rcpp, codetools, crayon, rex, methods, highlight, jsonlite, rstudioapi, withr, httr

**License** MIT + file LICENSE

**LazyData** true

**Suggests** testthat, xml2, fasttime, tibble, lassoshooting, devtools, covr, BiocInstaller

**Remotes** jimhester/highlite, gaborcsardi/gh, hadley/memoise

**LinkingTo** Rcpp

**RoxygenNote** 6.0.1

**Collate** 'RcppExports.R' 'S3.R' 'rcpp.R' 'call.R' 'internal.R' 'external.R' 'github.R' 'highlight.R' 'lookup.R' 'package.R' 'registered\_routines.R' 'utils.R'

**Encoding** UTF-8

**Repository** <https://jimhester.r-universe.dev>

**RemoteUrl** <https://github.com/jimhester/lookup>

**RemoteRef** HEAD

**RemoteSha** eba63db477dd2f20153b75e2949eb333a36cccfc

--------------	----------

---

lookup	<i>Lookup a function definiton</i>
--------	------------------------------------

---

### Description

Lookup a function definiton

### Usage

```
lookup(x, name = substitute(x), envir = environment(x) %||% baseenv(),
      all = FALSE, ...)
```

### Arguments

x	name or definition of a function
name	function name if not given in x
envir	the environment the function was defined in
all	Whether to return just loaded definitions or all definitions
...	Additional arguments passed to internal functions

---

lookup_browse	<i>Browse a lookup</i>
---------------	------------------------

---

### Description

If a github or CRAN lookup, this will open a browser to the github code mirror. If a local file will open the application associated with that file type.

### Usage

```
lookup_browse(x = the$last_lookup)
```

### Arguments

x	The lookup to browse, by default will use the last url of the last lookup found.
---	--

---

lookup_usage	<i>Search for code usage on CRAN</i>
--------------	--------------------------------------

---

**Description**

This function uses GitHub's code search to search for a code usage in all packages on CRAN. It will open a browser window with the results so they can be explored.

**Usage**

```
lookup_usage(x)
```

**Arguments**

x	The term to search
---	--------------------

**Examples**

```
## Not run:  
lookup_usage("grep")  
  
## End(Not run)
```

---

source_url	<i>Retrieve the source url(s) from a lookup object</i>
------------	--

---

**Description**

Retrieve the source url(s) from a lookup object

**Usage**

```
source_url(x, ...)
```

**Arguments**

x	The object to return the source_url from
...	Additional arguments passed to methods
